

2 kW solar container outdoor power

Overview

How much power does a 2KW Solar System produce?

Our 2 kW solar systems feature DIY solar kits, which will produce at least 2kW (or 2,000 watts) of power. This translates to approximately 175 to 375 kilowatt-hours (kWh) per month depending on your system choice, location and other factors. Choose between a 2kW solar kit with microinverters and a 2.4kW off-grid kit.

How much space does a 2KW Solar System need?

A 2kW solar kit from GoGreenSolar requires about 107 square feet of space. Solar panels with microinverters allow you to place panels in various locations, directions and angles on your roof. This choice will offer you more flexibility if space is at a premium.

How much does a 2 kW solar system cost?

As of January 2022, the average cost of solar in the U.S. is \$2.77 per watt (\$5,540 for a 2-kilowatt system). That means the total 2 kW solar system cost would be \$4,100 after the federal solar tax credit discount (not factoring in any additional state rebates and incentives).

How much solar can a 20 foot container hold?

20 foot containers can expand from 3,000W of solar up to 6,000W. 40 foot containers can expand from 3,000W up to 12,000W of solar in the future. We love the strategically placed solar panels on top of the container roof - we've accomplished this secure mounting with our field tested RPS Scalable Ground Mount.

2 kW solar container outdoor power

CE UN38.3 MSDS

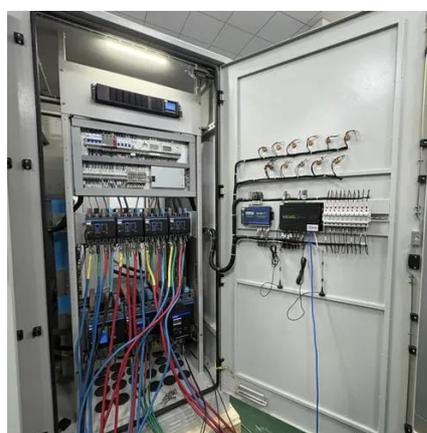

[Solar Container , Large Mobile Solar Power Systems](#)
