As South Africa's power woes worsen, Cape Town is seeking to double electricity supplies from hydropower from the current 200 megawatts (MW) in a desperate bid to reduce the impact of chronic power outages. South Africa's second-biggest city is trying to reduce its reliance on the national utility.

One of China's biggest companies, the Fortune 500-listed PowerChina, is establishing itself among energy sector players seeking to offer solutions to the crippling blackouts predicted to last until 2027 in South Africa. The country is seeking to transition to a greener manufacturing economy by.

--By Consul-General You Wenzhe, published on Cape Times, June 10 At the recently concluded G7 Finance Ministers and Central Bank Governors meeting, led by the United States, a statement was issued once again hyping the so-called issue of "overcapacity" in China's new energy industry. Following the.

CAPE TOWN, Aug. 21 (Xinhua) -- At 6:30 a.m. every morning in De Aar, a small town more than 750 km northeast of Cape Town, the legislative capital of South Africa, Deswin Basson would stand at the door of his house in the cold wind, waiting for his colleagues to pick him up and drive him to work at.

Europe and the United States have recently begun to amplify the notion of China's

supposed "overcapacity" and assert that it poses a "threat" to the global market, and solar panels are one of the main areas. However, it's worth considering what impact this "overcapacity" could have on developing.
