

Are there any communication project base stations in Paris

Overview

Cellnex, Europe's leading independent telecoms infrastructure operator, has been commissioned by the Société des grands projets to provide all mobile operators with passive infrastructure to enable them to offer their connectivity services in all the stations and tunnels between.

Cellnex, Europe's leading independent telecoms infrastructure operator, has been commissioned by the Société des grands projets to provide all mobile operators with passive infrastructure to enable them to offer their connectivity services in all the stations and tunnels between.

Launched in May 2023, the TELEO demonstrator aimed at validating first high throughput laser communications to and from the geostationary orbit. It is such a huge success! A fruitful year for TELEO! CNES, Airbus Defence and Space and the start-up company OGS Technologies have just successfully.

To meet commercial and government customers' needs, the LoB relies on a comprehensive catalog of Satcom and LTE solutions: its goal is to design, deploy, install and maintain telecommunications services including a space component. Stations deployment and maintenance: Purchase / Rental of equipment.

The Ka-band is one of the innovations of the 4th generation SYRACUSE. These anchors are part of a strategic project involving four stations distributed across two sites. They ensure robust and secure communications between troops in operation and the mainland. Concurrently, technical training.

SYRACUSE IV programme, involving SYRACUSE 4A and SYRACUSE 4B satellites, enhances the operational capabilities of the French Army. The SYRACUSE IV satcom stations will be installed on the Serval light multi-role armoured vehicles as part of the Scorpion programme. Credit: Ministère des Armées/.

The French defence procurement agency (DGA) has awarded Thales the Neptune contract to provide thirty dual-band X/Ka satellite communication stations for the French Army. The stations will act as on-the-pause (OTP) tactical communication nodes for the high-throughput satellite communications.

The Grand Paris Company (SGP) has selected the consortium made up of ENGIE

Solutions and Nokia to deploy a private 4G / LTE network and the associated communication services for the new automated metro lines of the “Grand Paris” Express metro. With 200 kilometers of network, the Grand Paris Express.
