Since 2015, Gerchamp has provided battery monitoring system solutions for over 170,000 batteries with leading BMS technology and high-quality services, ensuring the security and safety for its critical backup power supply. Modern data centers handle massive volumes of enterprise and personal data.

Infineon offers a wide range of products for battery back-up units in applications like telecom and data centers, both for the BMS and the DC-DC stage A BMS ensures high performance and safe operation of Li-ion batteries. It is a must-have and performs actions such as SOC (state of charge) and SOH.

Today Businesses require continuous supply of electricity for their growth, battery back-ups & UPS's have been a solution to the constant supply of electricity. To keep things running effectively and avoid unnecessary break downs, battery monitoring has become an essential. Many System & UPS.

A redundant power supply system typically involves multiple power sources to ensure continuous operation even if one fails. This redundancy can be achieved through various configurations such as dual power supplies, uninterruptible power supplies (UPS), or generator backups. The goal is to provide.
