Both circuit breakers and fuses are safety devices designed to regulate the electrical current in your home and protect your electrical system from overloading or short circuits. But they do this in very different ways. What is a circuit breaker?

A circuit breaker is a switch that automatically.

Once a fuse blows, it must be physically replaced with a new one to restore power, unlike a breaker which only needs to be switched back on. You can usually identify a fuse box by the presence of twist-in plugs with a glass center or cylindrical cartridge fuses, which are typically found in older.
