A circuit breaker is a switch that automatically shuts off electrical flow when a fault is detected. It prevents wires from overheating and protects your appliances and devices from damage. When working properly, it will "trip" (turn off) when there's a surge or overload. But when it starts.

Both circuit breakers and fuses are safety devices designed to regulate the electrical current in your home and protect your electrical system from overloading or short circuits. But they do this in very different ways. What is a circuit breaker?

A circuit breaker is a switch that automatically.

A blown fuse might seem like a minor hassle, but it's often your home's way of telling you something's off with the electrical system. Maybe the lights flicker when you turn on the microwave, or you've noticed a strange burning smell near an outlet. Whatever the case, it's worth paying attention.
