

Colombia household energy storage anti-dumping

Overview

On July 19, 2024, Colombia made a preliminary ruling on the case, imposing a temporary anti-dumping duty of 29.9% on the products involved at offshore price. The measure will take effect from the day after the announcement was published in the official gazette and will be valid for.

On July 19, 2024, Colombia made a preliminary ruling on the case, imposing a temporary anti-dumping duty of 29.9% on the products involved at offshore price. The measure will take effect from the day after the announcement was published in the official gazette and will be valid for.

Colombia's experience in the use of safeguards and anti-dumping duties differs from international trends. On the one hand, the number of investigations conducted is substantially lower than that recorded in most of the hemisphere's large and medium-size countries. On the other, while there is a

Further to Commercial Information Circular No. 799/2024 of 3 October 2024 regarding the preliminary determination of anti-dumping (AD) investigation against certain flat-rolled iron, non-alloy steel and alloy steel products classified under Colombian Harmonised Tariff Schedule (HTSCO) codes.

On January 22, 2025, the Colombian SB410 steel Ministry of Trade, Industry and Tourism issued Announcement No. 007 in the official gazette, making a final anti-dumping ruling on galvanized and aluminum coated zinc sheet coils (Spanish: Lámina lisa Galvanizada y Galvalume y teja Galvanizada y.

Anti-dumping duties are tariffs placed on imports by the importing country's government in order to protect domestic industries against foreign goods being sold at prices below their fair market value. This is done to prevent "dumping," which is when a country exports goods at a price lower than.

On May 21, 2025, the Ministry of Commerce, Industry and Tourism of Colombia issued Notice No. 121 in the Official Gazette, making a preliminary anti-dumping determination on welded pipes [Spanish: tubería soldada, de sección circular, de hierro o acero, de los tipos utilizados en la protección de.

Galvanized steel coil is a steel plate material formed by galvanizing using hot-

rolled steel strip or cold-rolled steel strip as the base material. The galvanized layer can effectively prevent the steel plate from direct contact with the external environment, thus playing an anti-corrosion and.
