

Communications Install 5G base stations

Overview

What is 5G network installation?

5G network installation includes the setup, deployment, and verification of new radios, antennas, fiber links, and power sources. The next-generation of radio access networks (RAN) also brings wholesale changes to fronthaul, mid-haul, and backhaul fiber installation to support split BBU architecture and network function virtualization (NFV).

Will a 4G base station be upgraded to a 5G network?

ation components and antenna mast systems. Upgrading 4G base stations by software to non-standalone (N A) 5G will still require hardware changes. It will act as an interim, but it will still not satisfy the need for true 5G network architecture. The number of base stations needed increases with each generation of mobile technolo.

What is a 5G base station?

A 5G Base Station is known as a gNode B (next 'generation' Node B). This is in contrast to a 4G Base Station which is known as an eNode B ('evolved' Node B), and a 3G Base Station which is known as a Node B. Figure 21 illustrates two Standalone (SA) Base Station architectures, known as 'option 2' and 'option 5'.

What is 5G installation & why is it important?

5G installation is driving advances and upgrades that span the entire wireless network ecosystem. The stringent test requirements and unique installation challenges for new 5G cell sites and RAN deployments can only be addressed through versatile, automated 5G test solutions.
