

# Energy storage cabinet battery price increase

## Overview

---

According to Anza's Q2 Storage pricing insights report, the second quarter saw the sharpest single jump in battery energy storage prices since 2021, when the industry was dealing with post-pandemic supply chain woes.

According to Anza's Q2 Storage pricing insights report, the second quarter saw the sharpest single jump in battery energy storage prices since 2021, when the industry was dealing with post-pandemic supply chain woes.

Tariffs are greatly affecting the battery energy storage market because it's one of the remaining clean energy sectors that sources materials mainly from China. According to Anza's Q2 Storage pricing insights report, the second quarter saw the sharpest single jump in battery energy storage prices.

Tariffs could raise battery costs for U.S. utility-scale energy storage installations by more than 50%, according to analysis by Wood Mackenzie. Permission granted by Intersect Power Import tariffs could raise battery costs for U.S. utility-scale energy storage installations by more than 50% and.

Battery energy storage systems (BESS) are particularly susceptible to the impact of tariffs, as highlighted by analyses from Wood Mackenzie and Anza Renewables. Their data indicates a significant increase in BESS costs in the last quarter. Published on June 9, 2025, by Brian Martucci According to.

2025 is likely to see battery prices surge in the United States on the back of increases in tariffs and duties imposed on battery energy storage systems and their components from China. While lithium iron phosphate (LFP) capacity is being established outside of China, few options exist today to.

Procurement platform Anza Renewables has published its first quarterly US energy storage pricing insights report covering battery cell pricing, AC and DC-integrated systems, list prices and more. Anza notes that tariffs will continue to shape pricing strategies. The figures in this report, for Q1.

2025 is shaping up to be the year when energy storage battery prices make lithium-ion cells cheaper than a Starbucks latte per kilowatt-hour. With prices for large-scale lithium iron phosphate (LFP) batteries plummeting 35% in 2024 alone

[1], the industry's racing toward what analysts call the.
