

Energy storage cabinet installation documentation

Overview

What are the components of energy storage system?

The energy storage system consists of a bidirectional power converter PCS, a battery system, an energy management system EMS, and other equipment, as shown in Figure 2-1 below. When the system is discharging, DC power from the lithium batteries is converted into AC power by the PCS.

How many kWh is a battery cabinet?

The total nameplate energy of each battery cabinet is 279.55 kWh, the string nominal voltage is 998.4 V, and the voltage operation range is 873.6 V to 1123.2 V. The liquid-cooling chiller is equipment that can control the temperature of the antifreeze liquid of the energy storage battery and reduce the environmental humidity.

How long should an energy storage system be?

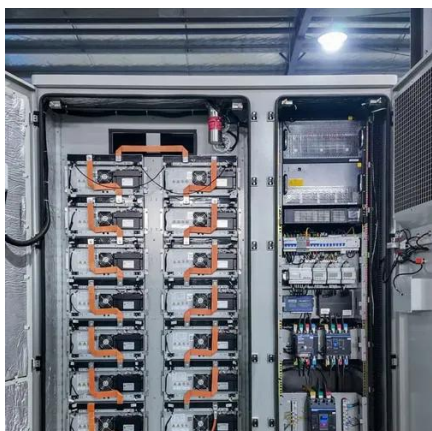

29.5 ft (9 m) long. The energy storage system must be installed on a structure supported by a concrete foundation or channel steel with a surface made of flame-resistant materials. The foundation must be smooth, solid, safe, reliable, and have sufficient load-bearing capacity. The foundation surface must not be sunken or inclined.

Can a PCS cabinet be installed together with a battery cabinet?

The PCS cabinet is designed to be installed together with the battery cabinet(s). Please note that the provided DC and communication cables for connection between the PCS cabinet and battery cabinet are 29.5 ft (9 m) long. The foundation embedded parts are recommended to be at least 7.9 in (200 mm) apart.
