

# Energy storage integrated mobile charging station

## Overview

---

One of the most effective ways to achieve this is by integrating Battery Energy Storage Systems (BESS) with EV charging stations. This innovative approach enhances grid stability, optimizes energy costs, and supports the transition to a more sustainable transportation ecosystem.

Bidirectional electric vehicles (EV) employed as mobile battery storage can add resilience benefits and demand-response capabilities to a site's building infrastructure. A bidirectional EV can receive energy (charge) from electric vehicle supply equipment (EVSE) and provide energy to an external.

Energy storage systems and intelligent charging infrastructures are critical components addressing the challenges arising with the growth of renewables and the rising energy demand. Hybrid energy storage systems, in particular, are promising, as they combine two or more types of energy storage.
