How much does a commercial battery energy storage system cost?

**Average Installed Cost per kWh in 2025** In today's market, the installed cost of a commercial lithium battery energy storage system — including the battery pack, Battery Management System (BMS), Power Conversion System (PCS), and installation — typically ranges from: \$280 to \$580 per kWh for small to medium-sized commercial projects.

How much does a battery system cost?

CAPEX includes the cost of the battery system itself, installation, permits, and other infrastructure needed for the system's operation. For example, a lithium-ion battery system for commercial use costs around \$130 per kWh.

Should you invest in a commercial battery storage system?

Investing in commercial battery storage systems now offers benefits such as shorter payback periods, energy independence, reduced peak power costs, and achieving sustainability or carbon neutrality goals faster. Additionally, government incentives make systems more affordable.

What are energy storage costs?

When considering energy storage costs, it's crucial to take both capital expenditure (CAPEX) and operational expenditure (OPEX) into account. CAPEX includes the cost of the battery system itself, installation, permits, and other infrastructure needed for the system's operation.
