

Malaysia Penang Titanium solar container battery Project

Overview

What is Malaysia's first large-scale battery project?

In 2024, Malaysia launched its first large-scale storage initiative, known as MyBeST, to build four grid-connected battery systems of 100MW/400MWh each. The bidding round opened in May and closed in July, with winning projects expected to come online by 2027.

Will Penang Port have solar panels?

He added that Penang Port is exploring the possibility of setting up solar panels on stilts on shallow water pockets in its premises, “like a solar farm”. On the other hand, he said the global cruise business is expected to “go fully shore-power” by 2030.

How much does a battery project cost in Malaysia?

Winners are expected to be shortlisted as early as October, with full operation of the projects slated to begin by April 2027. The estimated cost for each project is between RM270 million and RM300 million, depending on the type of battery system used and construction costs, one source said.

Can solar panels be installed on water bodies in Penang?

The state Infrastructure, Transport, and Digital Committee chairman said that due to Penang’s limited and high-value land, installing solar panels on water bodies could be a more practical alternative.
