Energy storage will play a crucial role in meeting our State’s ambitious goals. New York's nation-leading Climate Leadership and Community Protection Act (Climate Act) calls for 70 percent of the State's electricity to come from renewable sources by 2030 and 3,000 MW of energy storage by 2030.

That's the question explored by the Western Wind and Solar Integration Study, one of the largest such regional studies to date. During its first phase, the Western Wind and Solar Integration Study (WWSIS) investigated the benefits and challenges of integrating up to 35% wind and solar energy in the.
