

Selling energy storage vehicles at affordable prices

Power Conversion System

- Single-stage three-level modularization
- Multi-branch input to reduce battery series and parallels connection

Overview

Can you afford a used electric car?

That is expanding the number of people who can afford to buy such models. Sales of used electric vehicles rose 40 percent in July from a year earlier, according to Cox Automotive, a research firm.

Are battery-powered cars a good deal?

But a growing number of shoppers are discovering that for used cars, often the opposite is true. Used battery-powered vehicles often sell for less than comparable cars with internal combustion engines, making them a good deal even before calculating savings in maintenance costs and fuel.

How many miles can an electric car go on a charge?

A few years ago, most electric vehicles couldn't travel more than 200 miles on a charge. Now cars that can go 300 miles are common, and within a few years 400 miles will be the norm. Prices of new electric models have also come down, with many selling for less than \$40,000. That automatically pushes down prices of pre-owned cars.

Are electric cars losing value?

Electric vehicles have lost value quickly partly because rapidly advancing battery technology has made older models less attractive. A few years ago, most electric vehicles couldn't travel more than 200 miles on a charge. Now cars that can go 300 miles are common, and within a few years 400 miles will be the norm.
