

Solar curtain wall installation at Laayoune shopping mall

Overview

What is a curtain wall system?

A curtain wall system is a protective structure for a building's exterior. It consists of a grid in the facade, also known as the mullion, which determines how the glass fits into the wall. Glass curtain walls allow natural light into buildings, making them more energy efficient.

Are glass curtain walls energy efficient?

Glass curtain walls are energy efficient as they help natural light enter buildings. They use specially glazed glass, providing an esthetically pleasing exterior or interior for your office building. The use of natural light reduces the need for artificial lighting, making glass curtain walls an energy-saving solution for commercial buildings. Curtain walls have been used in commercial buildings for a long time, especially in New York City.

Can curtain walls be used in commercial buildings?

Curtain walls have been used in commercial buildings, especially in New York City and New Jersey, for a long time. Placing a curtain wall on the exterior of these buildings is now a common practice.

What is a photovoltaic curtain wall?

They enhance thermal comfort and help prevent the greenhouse effect. A standard curtain wall offers no return on investment. In contrast, a photovoltaic curtain wall not only insulates the building but also generates power for over 30 years. This reduces monthly electricity bills and ultimately pays for itself over time.
