

Solar light w67 watt

Overview

How many lumens does a solar street light need?

More lumens mean a brighter light. For example, pathway lights typically need 50-200 lumens, while solar street lights may require 2000-10,000 lumens depending on the application. When you think of solar lights, the first number that might catch your eye is “watts.”

Should you choose a solar light with low lumens?

If you pick a solar light with low lumens, it might look pretty but won't light up your garden path. On the other hand, a solar light with high lumens will give you the brightness you need without wasting energy. With that in mind, let's uncover why watts, though familiar, no longer tell you the full brightness story.

Is solar street light a good product?

Solar street light is a good product to save energy and protect environment. JD-198 solar light is used high quality material, through rigorous testing, specially designed for outdoor high-power lighting. It brings you the convenience of no-wire lighting and enjoyment of life, and can also reduce carbon emissions indirectly.

How many lumens does a solar garden light need?

A decorative solar garden light that adds a gentle glow doesn't need to be bright—5 to 50 lumens is common. For pathway lights that ensure you won't trip in the dark, you'll want around 50 to 200 lumens. Porch lights and wall lanterns usually range from 50 to 150 lumens, giving enough light to see steps and find your keys.
