Somewhere in the tumult of the global economy in recent months, solar panel prices hit bottom and then began to rise. The oversupply that helped to push prices down last year has eased a bit. This, plus a host of other factors, mean that prices are now increasing, globally and in the United States.

Electricity prices are rising faster than inflation due to a surge in demand from data centers, outdated energy infrastructure, and increased utility spending on grid upgrades and transmission. The average U.S. household saw its rate increase 6-7% in the past year, with further hikes expected in.

In recent months, solar panel prices have experienced a notable increase after reaching a low point. This shift is influenced by various factors, including international market dynamics and domestic policy changes. Though prices are rising, they remain relatively affordable compared to historical.

After a strong 2024 that drove solar and storage prices to all-time lows, the first half of 2025 shows a mix of momentum and uncertainty. Homeowners are still eager to go solar, but shifting federal policies, tariffs, and tightening trade restrictions are creating headwinds for contractors and.
