### coding style

As for chaining `super::super`, as I mentioned in the question, I have still to find an interesting use to that. For now, I only see it as a hack, but it was worth mentioning, if only for the differences ...

### [Understanding Python `super\(\)` with `\_\_init\_\_\(\)` methods](#)

`super()` lets you avoid referring to the base class explicitly, which can be nice. But the main advantage comes with multiple inheritance, where all sorts of fun stuff can happen.

### [Difference between `super T>` and `extends T>` in Java](#)

What is the difference between `List super T>` and `List extends T>`? I used to use `List extends T>`, but it does not allow me to add elements to it `list.add (e)`, whereas the `List`

### [How does Python's `super \(\)` work with multiple inheritance?](#)

In fact, multiple inheritance is the only case where `super()` is of any use. I would not recommend using it with classes using linear inheritance, where it's just useless overhead.

[Why do this \(\) and super \(\) have to be the first statement in a](#)

The automatic insertion of super () by the compiler allows this. Enforcing super to appear first, enforces that constructor bodies are executed in the correct order which would ...

## java

I'm currently learning about class inheritance in my Java course and I don't understand when to use the super() call? Edit: I found this example of code where super.variable is used: class A {

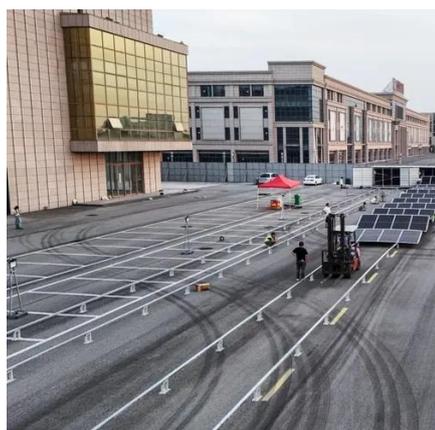

## oop

The one without super hard-codes its parent's method - thus it has restricted the behavior of its method, and subclasses cannot inject functionality in the call chain. The one ...

['super' object has no attribute '\\_\\_sklearn\\_tags\\_\\_'](#)

'super' object has no attribute '\_\_sklearn\_tags\_\_'. This occurs when I invoke the fit method on the RandomizedSearchCV object. I suspect it could be related to compatibility ...

### AttributeError: 'super' object has no attribute

I wrote the following code. When I try to run it as at the end of the file I get this stacktrace: AttributeError: 'super' object has no attribute do\_something class Parent: def ...

### **super () in Java**

super() is a special use of the super keyword where you call a parameterless parent constructor. In general, the super keyword can be used to call overridden methods, ...
