We perform the evaluation, testing and certification, and standards solutions your battery and energy storage products require, leveraging our IECEE CB Scheme accreditation (which allows you to access up to 70 countries) and CSA Group's international certification team to get you to new markets.

Assists users involved in the design and management of new stationary lead-acid, valve-regulated lead-acid, nickel-cadmium, and lithium-ion battery installations. The focus is the environmental design and management of the installation, and to improve workplace safety and improve battery.

These approaches take the form of publicly available research, adoption of the most current lithium-ion battery protection measures into model building, installation and fire codes and rigorous product safety standards that are designed to reduce failure rates. In addition to these prevention.

However, storing and managing energy—especially lithium-ion batteries (LIBs)—presents unique fire and life safety challenges. To mitigate risks, a range of codes and standards guide the design, installation, operation, and testing of energy storage systems. Whether you are an engineer, AHJ.

Working on a battery should always be considered energized electrical work. NFPA 70E®, Standard for Electrical Safety in the Workplace®, Chapter 3 covers special electrical equipment in the workplace and modifies the general requirements of

Chapter 1. The chapter covers the additional safety-related.
