

Togo Uninterruptible Power Supply Plant

Overview

Kékéli Thermal Power Station, also Kékéli Efficient Power Station, is a 65 MW (87,000 hp) -fired thermal power plant located in the city of , the capital of .

The work started on March 4 and caused power disruptions in Lomé and other parts of the country. CEET restored the unit to full capacity and reconnected it to the national grid. The company said this will stabilize the electricity supply and boost overall production.

The work started on March 4 and caused power disruptions in Lomé and other parts of the country. CEET restored the unit to full capacity and reconnected it to the national grid. The company said this will stabilize the electricity supply and boost overall production.

(Togo First) - The Togolese power utility, Compagnie Énergie Électrique du Togo (CEET), has finished maintaining a key thermal power unit in the national park on April 15, 2025. The work started on March 4 and caused power disruptions in Lomé and other parts of the country. CEET restored the unit.

Togo is a state in West Africa, located on the Gulf of Guinea. It borders Burkina Faso to the north, Benin to the east, Ghana to the west and the Atlantic Ocean to the south. The country covers almost 57.000 km². The plains in the north and south are dominated by savannah land, which makes up about.

Kékéli Thermal Power Station, also Kékéli Efficient Power Station, is a 65 MW (87,000 hp) natural gas -fired thermal power plant located in the city of Lomé, the capital of Togo. [1] The power station is located in the neighborhood known as Kékéli, located in the area of the Port of Lomé. "Kékéli".

The upcoming maintenance work on the West African Gas Pipeline (WAGP), scheduled from February 5 to March 2, 2025, could affect electricity supply in Togo, Benin, and Ghana. In response, the Togolese authorities, through the "Compagnie Énergie Électrique du Togo" (CEET), have put in place measures.

Kékéli Efficient power plant is an operating power station of at least 65-megawatts (MW) in Lome, Golfe, Maritime, Togo. Loading map. CHP is an abbreviation for Combined Heat and Power. It is a technology that produces electricity and thermal energy at high efficiencies. Coal units track this.

The Togolese Electricity Company (CEET) has warned of electricity supply disruptions throughout March due to ongoing maintenance operations. These maintenance activities, previously postponed multiple times, began last week and will continue until March 25th. In response, the Togo Consumers' League.

Key Problems of The Energy Sector
Policy Framework, Laws and Regulations
Institutional Set Up in The Energy Sector
Further Information
Currently, seven power plants are operated with fossil fuels in Togo with a cumulated capacity of ~260 MW. These so-called thermal power plants use thermal gas, thermal oil and thermal DDO to produce electrical energy. Most of the power plants of this type are managed by the grid operator and utility CEET. The largest two run by CEET are located in See more on
