

Victoria Communications Base Station Uninterruptible Power Supply Shutdown

Overview

What is an uninterruptible power supply (UPS)?

In most traditional power designs, one uninterruptible power supply (UPS) supports your servers, switches and storage devices. The single UPS is connected to utility power and then power flows from the UPS through a power distribution unit (PDU) into the connected equipment.

Why should telecom operators invest in a reliable UPS system?

Modern UPS systems also incorporate advanced features like voltage regulation and surge protection. These features stabilize power supply and safeguard equipment from fluctuations. By investing in reliable UPS solutions, telecom operators can mitigate the risks associated with power outages and maintain operational continuity.

Why is ups important in a datacentre?

For instance, in a datacentre, UPS infrastructure supports servers and networking devices, ensuring continuous performance. Modern UPS systems also incorporate advanced features like voltage regulation and surge protection. These features stabilize power supply and safeguard equipment from fluctuations.

Does ups protect against lightning induced power surges?

No, UPS or any other form of surge protection device can provide total protection against lightning-induced power surges. A good UPS will suppress the majority of surges without itself suffering damage.
