

# Vietnam new energy storage foreign trade orders

## Overview

---

Recent data indicates a 50% year-on-year increase in cross-border orders for new energy products in Vietnam during the first quarter of 2025, with significant contributions from photovoltaic components, energy storage equipment, and electric vehicle charging stations.

Recent data indicates a 50% year-on-year increase in cross-border orders for new energy products in Vietnam during the first quarter of 2025, with significant contributions from photovoltaic components, energy storage equipment, and electric vehicle charging stations.

HANOI, Vietnam – As Chinese new energy companies grapple with trade barriers and policy uncertainties in the United States and Europe, Vietnam is emerging as a promising alternative market. Recent data indicates a 50% year-on-year increase in cross-border orders for new energy products in Vietnam.

Vietnamese authorities are looking to retroactively revise purchase prices for 173 solar and wind projects, reducing revenues by 25% to 46%, risking bankruptcies across the renewable energy sector, and jeopardizing investor confidence needed to meet the government's 2030 targets of 73 gigawatts.

One of the key highlights of Vietnam's revised Power Development Plan VIII (PDP8) is the significant increase in the targets for Battery Energy Storage Systems (BESS). The original PDP8 approved in 2023 had set out a target of 300MW of BESS capacity by 2030. The revised PDP 8 (approved by the Prime.

Vietnam is taking another step toward modernizing its renewable energy sector by unveiling updated feed-in tariffs (FiTs) for solar power, with a notable emphasis on encouraging battery energy storage systems (BESS). This policy move, effective throughout 2025, was formalized through Decision.

► Vietnam's Ministry of Industry and Trade mandates 15% storage for new renewable projects (up 5% from 2024), triggering a 300% surge in 2025 storage tenders. ► Industrial park "PV + Storage + EV Charging" integration becomes standard, with leveled energy costs below \$0.1/kWh. #PolicyWins.

Could Vietnam replace fixed feed-in tariffs with standardized auctions?

As global costs for solar, wind, and battery storage systems fall, Vietnam could replace fixed feed-in tariffs (FiTs) with standardized competitive auctions to procure clean energy at the lowest cost.

How will Vietnam's new energy storage scheme help investors?

Supa Waisayarat, Vietnam's adversary consultant at Thailand's Super Energy Corporation, noted that the new scheme supports the adoption of storage and provides developers and investors with more transparent pricing, which could encourage more power purchase agreements (PPAs) and improve financing confidence.
